

CS 201 LAB ASSIGNMENT:01

Project : Banking Management System

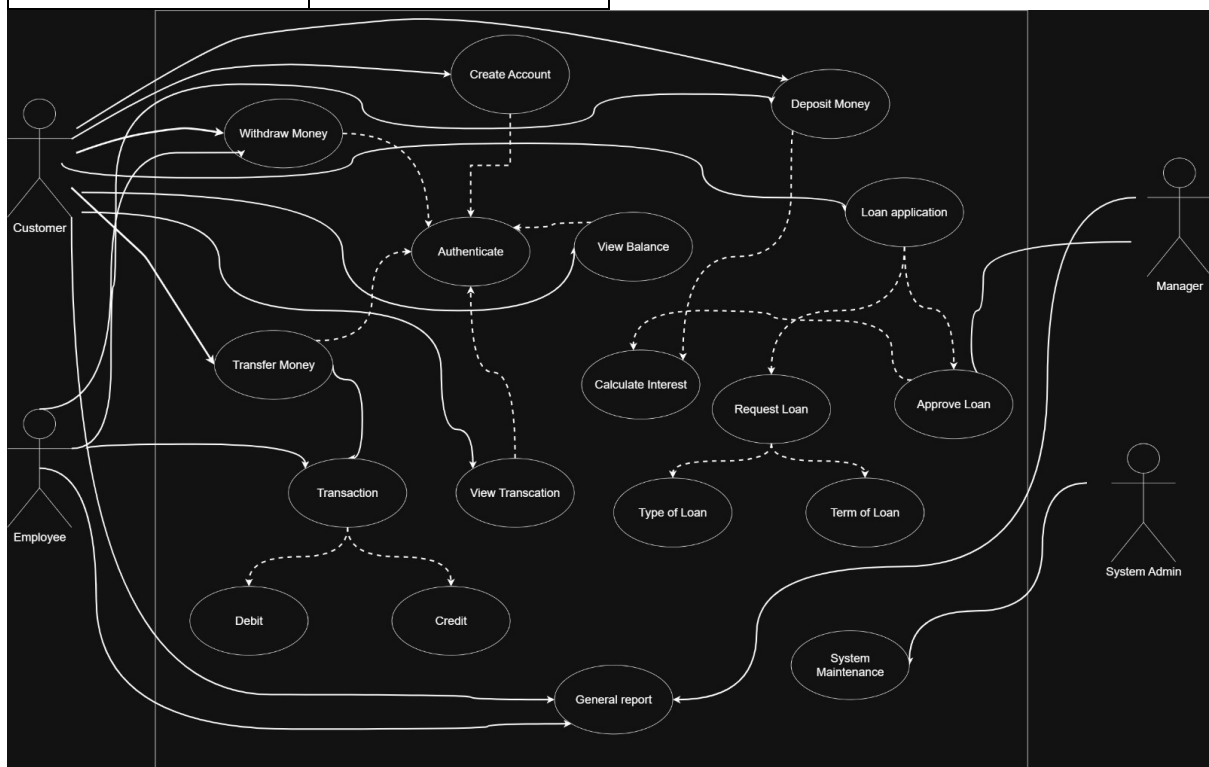

A bank user generally expects smooth services and experience from the bank. But the bank service providers sometimes failed to do so which might disappoint the users. It may be because of the human errors or any technical errors occurred. Some of these includes slow loan process, slow server which might be a problem while doing transactions. Also, while creating a account there will be need of checking the user details also which are correct or not. While transactions, is there the balance enough for doing the transactions, also is the receiver's details are correct or not. Also, while taking loans from bank, the user needs to be verified, does the user have that much income with which he can pay the loan back. These all are the problems for the topic banking management. To overcome this problems, there is a need of a platform which works smoothly and efficiently, which includes transfer of money on that platform, checking bank balance, managing our account, to keep an eye on our EMI and loans there should be a different section on the platform which allows user to access all these, which might be easy for users to do so instead to going to bank which might consumes time for all this.

1) Include Relationships (<<include>>)

From Use Case	To Use Case
Withdraw Money	View Balance
Transfer Money	Withdraw Money
Transfer Money	View Balance
View Transaction History	Authenticate
Generate Report	View Transaction History
Calculate Interest	View Balance

1) Extend Relationships

From Use Case	To Use Case
Withdraw Money	Apply for Loan
Deposit Money	Calculate Interest
Create Account	Authenticate
Apply for Loan	View Balance
